

As your students come back to school, be **Allergy** Ready!

Food allergies affect as many as **1 in 13 children**, and nearly **40 percent** of children with food allergies have a history of a severe reaction.

Severe allergic reactions to food can cause anaphylaxis and can be life-threatening. Make sure your school is Allergy Ready by understanding the risks associated with food allergies and how to properly respond to an emergency.

How to **CARE** for Students with Food Allergies - What Every Educator Should Know

Is a new, interactive online course that provides education for school personnel anytime, anyplace. Available free at www.allergyready.com, this online course uses current research evidence and expert consensus to help school personnel understand how to prevent and manage emergency situations due to food allergies.
